

## Green Management Guidelines

*Hyosung Advanced Materials executes various eco-friendly businesses under its Green Management System established by securing environment specialists. Also, specialized teams for environment & safety management are in place at all global sites to reduce the environmental effects caused from our corporate activities.*

1. Based on Hyosung Advanced Materials green management strategy system we create the foundations for green management as well as lead the climate change responses.
2. In order to minimize impact to the environment and our stakeholders, we established and manage the Green Management System through which we protect environment, prevent pollution, and proceed green projects.
3. We monitor environmental impact factors which may arise in the course of business activities such as hazardous substances, wastes, GHGs, and actively engage in environment conservation through preemptive reduction activities.
4. We strictly comply with legal frameworks, regulations & agreements related to SHE and minimize environmental by preemptive saving effort of energy and all resources such as water and minerals.
5. To effectively practice green management, we provide continuous education and training as well as sharing practices with our suppliers and stakeholders, increasing overall reliability.
